# PRODUCT FEATURE

## HEART COMFORTER

Our Heart Comforter is a sternum support brace used by Healthcare Professional on their post-op cardiothoracic patients. The Heart Comforter reduces chances of post-op complications.

**BENEFITS:**

- Wound Solidity
- Providing protection and support during sneezing, coughing and other strenuous movement.
- Pain Relief
- Reduce post-op complications & giving patients heartsease & control over their pain management & recovery.

### DECREASING FUTURE COMPLICATIONS

#### HEART COMFORTER

After an extensive cardiothoracic surgery, Heart Comforter helps protect against a host of potential complications. The Bevjai Heart Comforter ultimate focus is to help restore the patient to pre-op respiratory levels and stabilize the wound. By ensuring the above and attaining the above points, we help avoid wound complications and including the following: Pneumonia | Atelectasis | Dehiscence | Mediastinitis

## HOW TO USE ?

# LIMB RESTRAINERS

---

## LIMB RESTRAINERS

Medical restraints are physical restraints used during certain medical procedures to restrain patients with the minimum of discomfort and pain and to prevent them from injuring themselves or others. For example, the use of bed rails is routine in many hospitals and other care facilities, as the restraint prevents patients from rolling out of bed accidentally. Newborns frequently wear mittens to prevent accidental scratching.

# ORTHOTIC BRACING

## ARMSLING

Supports arm during recuperation of fractures, sprains or other injuries. Adjustable arm strap and buckle for exact arm positioning. Quick & easy Velcro fasteners allow quick, easy and customizable application to any degree of clamping. Immobilization: Shoulder-elbow with waist support strap

## UNIVERSAL ARMSLING

This universal arm sling features a large pocket for securing the arm in a fixed position for recovery. The universal armsling is made out of brush fabric to provide comfortable support. Ideal for stabilizing the shoulder, arm, and wrist after surgery or injury. The versatile sling can be used on either the right or left arm.

## HOW TO FIT SERIES ARMSLING

1. Connect end of strap through o-ring

2. Put arm in pouch and strap over shoulder

3. Secure o-ring strap to pouch

4. Place second closure strip on pouch.

5. Place back strap through second o-ring and fasten velcro onto strap

6. Place back strap around the back

7. Fasten back strap onto pouch

# ORTHOTIC BRACING

## CERVICAL SOFT COLLAR

The Cervical Soft Collar is a medium density soft foam collar with EVA stabilising panel that helps support the cervical spine. Cotton stockinette cover for better patient hygiene. Latex free. Ideal for post-operative rehabilitation or sprains and strains.

## POLYPAD COLLAR

The Polypad Collar gives support and stabilisation in a flexion and extension. It is contoured to follow occipital and mandibular lines. Plastic provides a more rigid design. Foam padding gives extra comfort.

## TRAUMA COLLAR

Trauma collars are made of EVA 35 sure material. These collars may provide support and pain relief for a variety of spinal conditions, including cervical spondylosis and acute neck pain.

## STIFFNECK COLLAR

Trauma collars are made of EVA 35 sure material. These collars may provide support and pain relief for limiting of movement of C1 & C2 . Mostly used in motor vehicle accidents.

## STIFFNECK COLLAR

Stiff neck collar is an innovative solution to the challenges of relative head size, neck length, flexibility of the neck and weakness of developing musculature. Used for long term usage.

# ORTHOTIC BRACING

## COLLAR & CUFF

This sling will provide comfort to the patient as it is used as a suspension support elevating the humerus, It also helps keep the arm in the best position for proper healing of the injury and decreases swelling. Our Collar & Cuff come in a 4m roll , 10 mm wide foam covered with stokingnett.

## ZIMMER FINGER SPLINTS

Zimmer Finger Splint is a medical device that can be applied to a finger while it heals from an injury. The primary purpose of the splint is to decrease some of the strain on the finger during normal activities through immobilization. This means that the finger is given some time to rest by preventing movement to protect it from further damage.

2mm aluminium strips & EVA float.

## SCROTAL SUPPORT

The suspensory jock supports and protects the scrotum/ testicles from external contact between the patients legs. Helps to relieve the pain, discomfort and strain of inflamed testicles. Ideal for post-operative care. Designed to reduce injury and to support the cremaster muscle which adds comfort and convenience for patients, enabling them to live a more productive life.

## TRIANGULAR BANDAGE

A triangular bandage is used as an arm sling or as a pad to control bleeding. It may also be used to support or immobilise an injury to a bone or joint or as improvised padding over a painful injury.

# ORTHOTIC BRACING

---

## KNEE COMFORTER

This Post-Operative brace is used for patients who have just had knee surgery. The knee comforter provides the patient with the correct support and comfort to aid their healing process. The brace is made with Brush Fabric with a 10mm foam to provide the best comfort to the patient.

## WRIST BRACE

A wrist brace is used to prevent drop wrist and Carpal tunnel syndrome. It is a universal support. It is a supportive garment worn around the wrist to reinforce and protect it against strains and sprains during strong use, or as a splint to help healing. Wrist braces are common accessories in injury rehabilitation processes involving the wrist.

# ORTHOTIC BRACING

## PNEUMATIC FOAMBOOT WALKER

Foam Boot Walkers provides semi-pneumatic support for the foot and ankle to prevent motion and aid healing of bone fractures and edema. It was designed specifically for foot and ankle injuries and performs the same function as a standard orthopaedic walking cast, with the added benefits of customised adjustment and support, and capability for easy removal.

## SKIN TRACTION ADHESIVE

**AVAILABLE IN ADULT & PAEDIATRIC**

It involves applying splints, bandages, or adhesive tapes to the skin directly below the fracture. A crepe bandage is used to wrap around the leg to give a firm support. A traction chord is tied at the distal end of the foot. Once the material has been applied, weights are fastened to it. The affected body part is then pulled into the right position using a pulley system attached to the hospital bed.

## SKIN TRACTION NON ADHESIVE

**AVAILABLE IN ADULT & PAEDIATRIC**

This convenient skin traction system consists of a 10mm foam liner, traction bag, cotton crepe bandage and traction cord. Traction can be used for both above and below knee application after injury and surgery. This ultimate brace made of durable thick foam laminated fabric, it provides adequate compression and custom fit. Can be worn either on left or right leg.
